

- Multi-patented innovation
- 6 sets of spokes with cross - members which lifts the material within the wheel
- Less area of resistance to the outside of the barrel giving an easier drive and allowing a smaller Horse Power Tractor
- Load is carried and tumbles within the large diameter wheel which means little or no damage to structure and fibre of the material
- Gives an evenly mixed ration with looser and fluffier feed which means an increase in food value for dairy and beef cattle
- The large diameter wheel, in conjunction with the tapered barrel design, has been proven to provide a very even mix - confirmed in Riddle Tests
- Very fast mixing time achieved- as the entire load is on the move from side to side as well as rolling within the mixing chamber.

Newrock's New Wheel Feeder is the next generation of Diet Feeder. This innovative development has multiple world patents pending.

Hydraulically controlled blade cutting system allows blades to be used only when required. This allows straw to be cut to appropriate lengths to suit the animals digestive system.

The Wheel Feeder will also take the round bale of silage and hay with blades operating at a cutting depth of 200mm.

The blades are on a quick release system for easy changing or resharpening.

All blade maintenance is undertaken outside the machine.

Superb Meal Mixer

Up to 7 tonnes discharged in 30 secs by means of bomb door.

No residue left in barrel

Dairy and Beef rations can be mixed and discharged in a short time.

Excellent machine for treating grain.

Bomb door opening to discharge

Discharging meal mix as you drive forward

Cutting blades in operation
Cutting the material

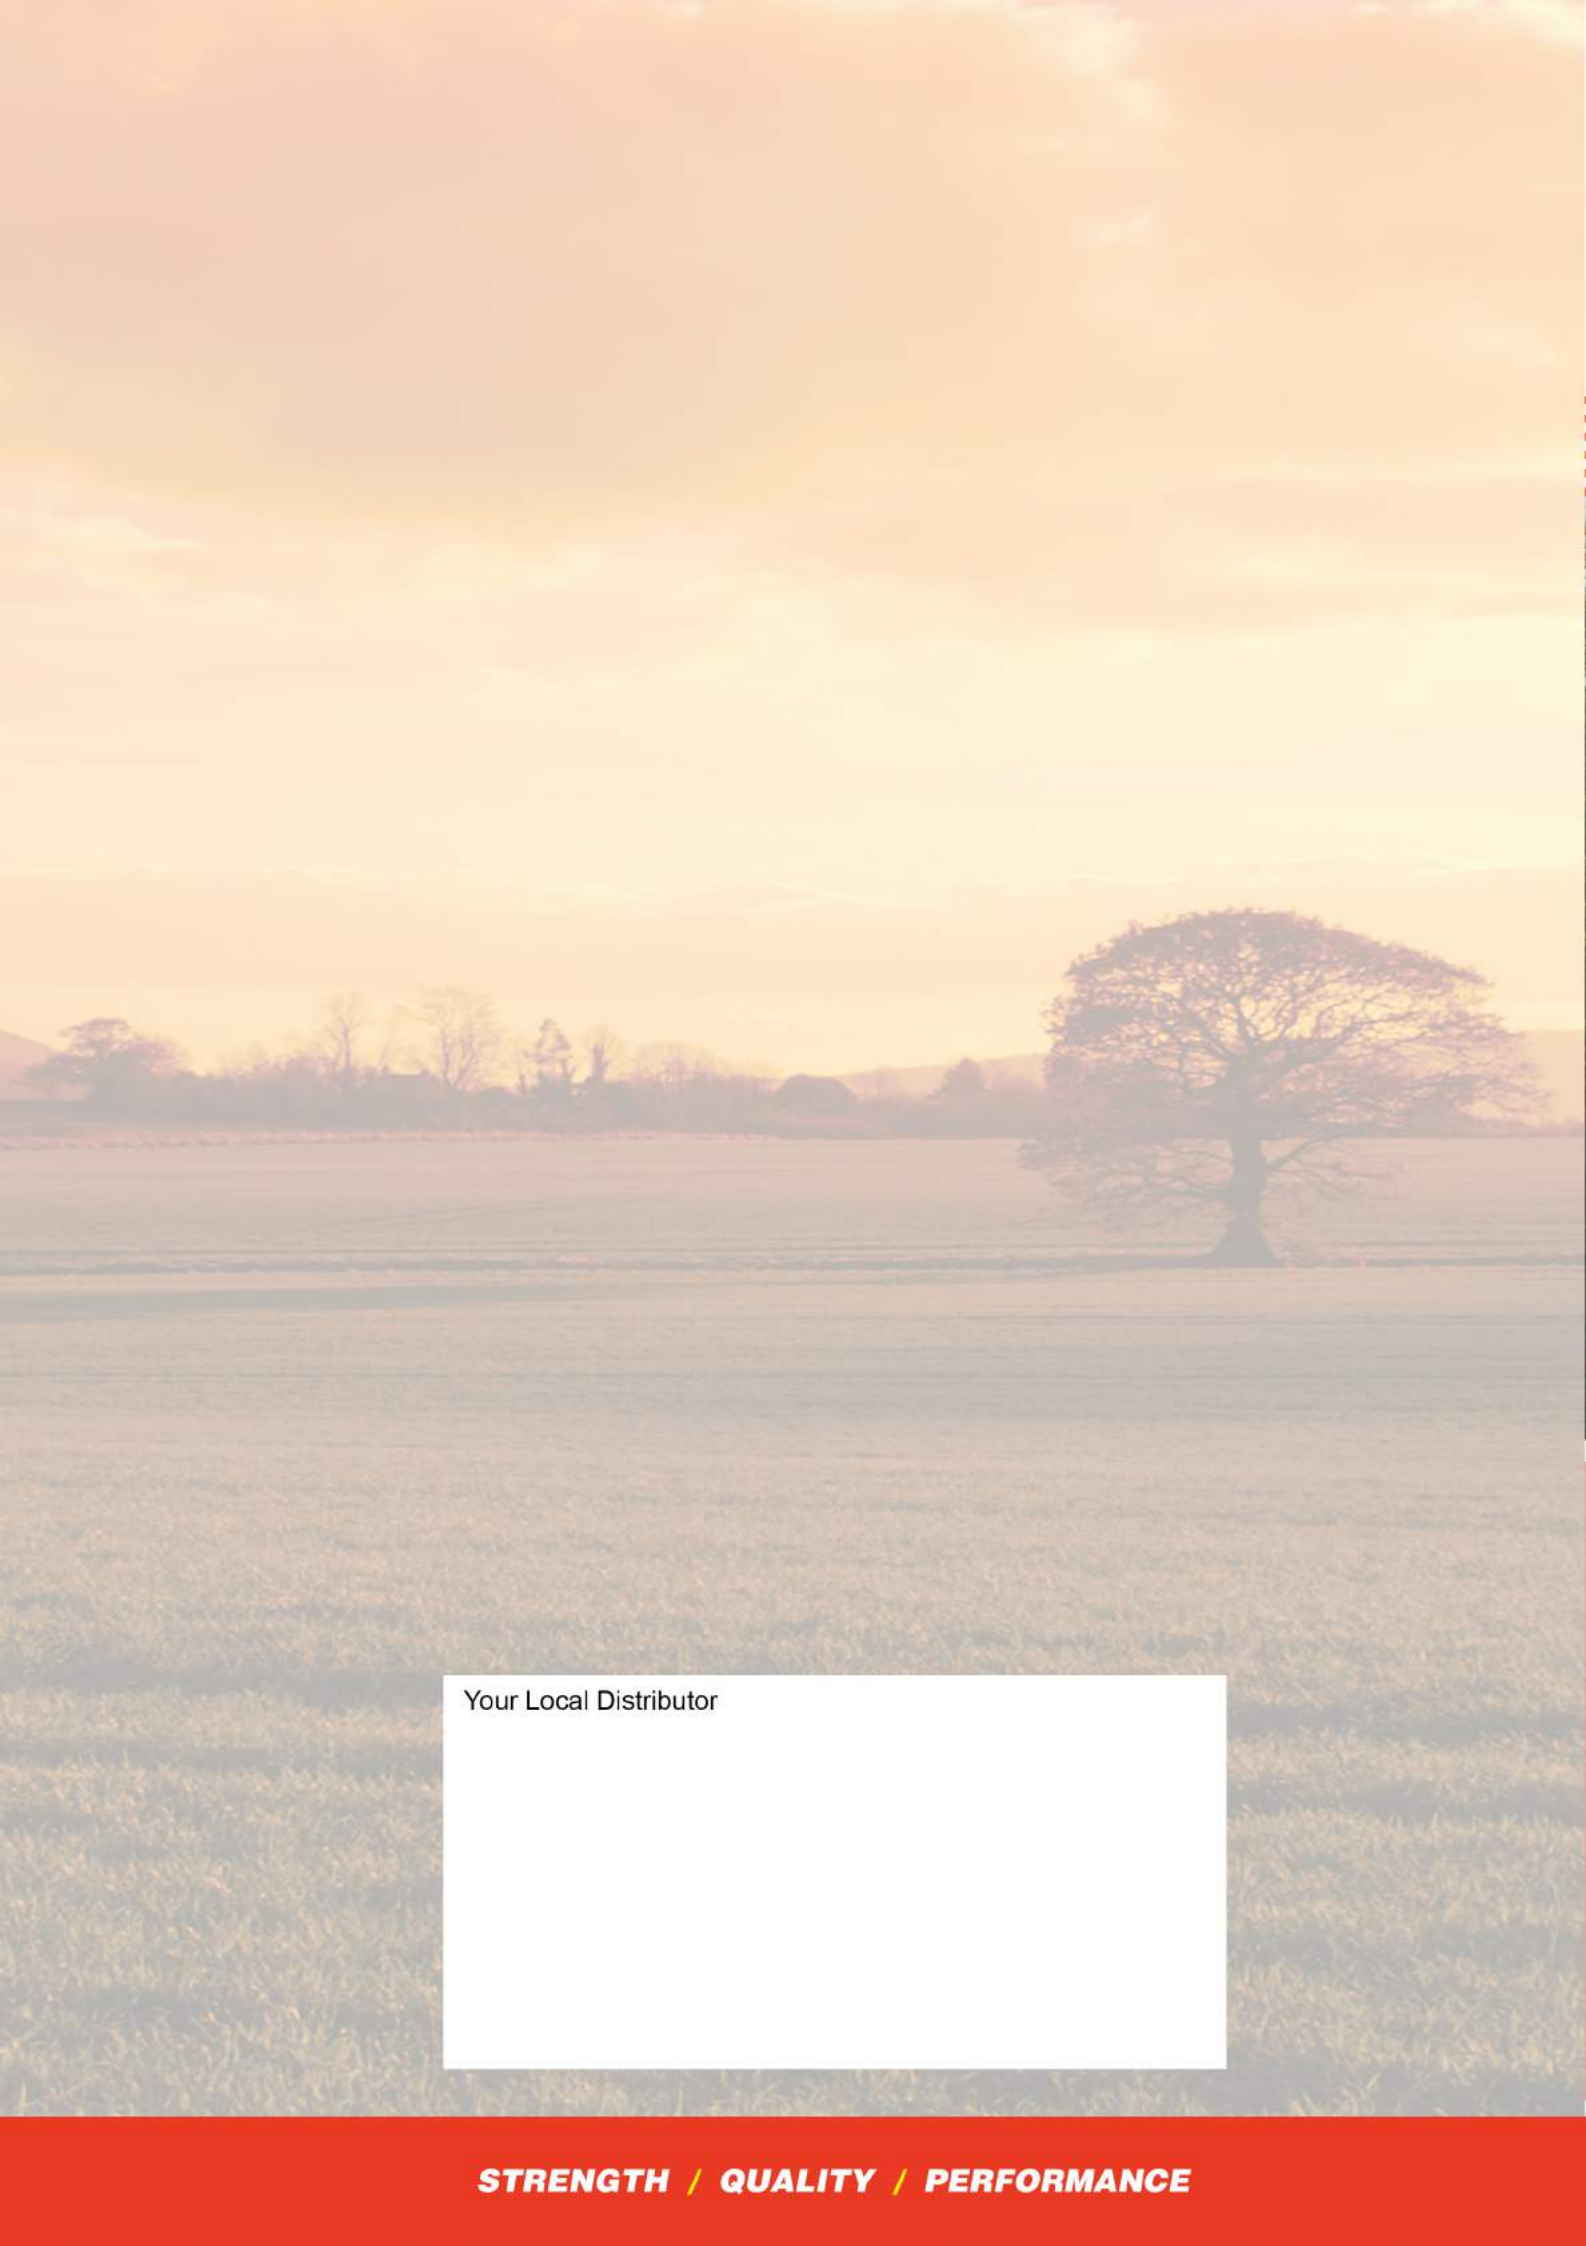

Feeding Out

Load discharged
